

IBX Provider Onboarding — Credentialing to Network Activation

Payer-side journey: a provider is enrolled into the IBX network. A single application flows through ten stages across five departments, creating and activating 20+ related records. Companion to *Provider_Onboarding_Process_Decomposition.md*.

Term mapping for journey maps: “Opportunity” → the **PAR application intake** (no literal Opportunity on the payer side) · “Work Item” → **Case** (routed & round-robin owned) · “Application / Case” → **IndividualApplication** (the “Case Manager” record). Path shown = full **Delegated** branch; IBC Professional Staff is a leaner subset.

LANE A — ONBOARDING (CREDENTIALING) left → right, one Case per application

EXTERNAL INTEGRATION TOUCHPOINTS

- CAQH · profile + attestation pre-fill, recred gate
- NPDB · adverse-action verification (in PSV)
- Precisely · address standardization
- NPPES / FSMB · license & NPI verification
- BCBSA · inter-Blue practitioner / role sync
- NCPDP · pharmacy provider data
- RCAT · roster compliance feed
- UPHS / UPenn · roster reconciliation (batch)

Handoff chain: Provider → Outreach → *Case routed (round-robin)* → PSV Analyst → *Final Submit* → Network Case Manager (PDA) → QC Reviewer → *routine* → Activation **or** *non-routine* → Medical Director → HACAC Committee → Activation → PDM Ops. Returns to a prior stage **restore the original owner** (no fresh round-robin).
